

CURRENT PRESS RELEASE

of the bredent group

Senden/Olsberg, Germany, June 2026

Prof. Dr. Fouad Khoury Partners with bredent group as Strategic Clinical & Scientific Partner

A new chapter in scientific collaboration, education and tissue-focused implantology

The bredent group, an internationally leading provider of innovative treatment concepts in implantology and regenerative dentistry, proudly announces a strategic long-term collaboration with internationally renowned oral surgeon and regeneration expert Prof. Dr. med. dent. Fouad Khoury, who joins the company as Key Opinion Leader (KOL) and Strategic Clinical & Scientific Partner.

This partnership marks an important milestone for the future of implant dentistry and brings together two organizations united by a common belief: that modern implantology must be biologically driven, scientifically grounded and clinically predictable.

For decades, the bredent group has been committed to treatment concepts that prioritize tissue preservation, immediate patient care and integrated workflows. With Prof. Dr. Khoury — one of the world's most recognized pioneers in hard and soft tissue regeneration and founder of the globally established Khoury Techniques (such as the Shell Technique, the Carota Technique) for autologous bone augmentation — the company welcomes a partner whose philosophy strongly reflects its own commitment to long-term clinical success and patient-centered care.

"My entire team and I are very pleased about our close collaboration with the bredent group, a family-owned company with a strong national and international presence. We hope that this collaboration will lead to further improvements in treatment options, enabling us to offer the best possible therapies to our patients. We also look forward to bringing our ideas to life in the areas of research and education with bredent's support," says Prof. Dr. Fouad Khoury.

"Some collaborations are strategic. Others are deeply aligned in values and vision. With Prof. Dr. Khoury, we found both. His contribution to regenerative dentistry has shaped generations of clinicians, and we strongly believe that together we can help advance education and biological treatment concepts for the benefit of clinicians and patients alike," says Gerald Micko, CEO of the bredent group.

Looking ahead

The collaboration will include a broad range of initiatives spanning international educational programs, scientific exchange, advanced training, congresses, clinical documentation and collaborative development in modern implant therapy.

Clinicians, partners and distributors worldwide can expect future educational opportunities designed to bridge scientific understanding with practical implementation — helping dental professionals achieve greater predictability in both surgical and prosthetic outcomes.

About Prof. Dr. Fouad Khoury

Prof. Dr. Fouad Khoury is internationally recognized as one of the pioneers in oral surgery, bone regeneration and implant dentistry. Through his groundbreaking work in autologous bone augmentation and tissue regeneration, he has significantly influenced modern implant dentistry and has received numerous international distinctions, including the Pioneers in Dentistry Award (2016) and the William R. Laney Award from the American Academy of Osseointegration (2017).

He is the Founder and Director of Privatklinik Schloss Schellenstein in Olsberg, Germany, and Professor at the Department of Oral and Maxillofacial Surgery at the University of Münster. Over the course of his career, he has authored numerous scientific publications, delivered more than 1,000 lectures and courses worldwide, and published internationally recognized textbooks on bone augmentation, soft tissue management and implantology.

About the bredent group

The bredent group is an internationally active, family-owned company headquartered in Senden (Bavaria), Germany. The company has been operating in the dental market since its foundation in 1974 and is now represented in more than 100 markets worldwide. With over 600 employees, it comprises three specialised business divisions: bredent, bredent medical and Dental Concept Systems (DCS).

The company develops, manufactures and distributes individual products and system solutions with a focus on implantology, prosthetic rehabilitation, biomaterials and digital dentistry, as well as comprehensive, tailored treatment concepts "Made in Germany". In doing so, the bredent group supports dentists and dental technicians in producing and maintaining functional, aesthetic and affordable dentures.

The bredent group pursues a holistic approach that focuses on practical and durable applications for modern dentistry and dental technology. The company's activities are based on close collaboration with users and continuous advancement of products, processes and systems to improve long-term treatment success and quality of life for patients.
